1. Articles

1.1. *Standard cases*

Standard article with three authors, journal, eprint, primaryClass, and explicit doi [1].

Collaboration only (no author field); should show “ATLAS Collaboration” with no trailing comma [2].

Collaboration and individual authors; should show “CMS Collaboration, S. Chatrchyan & V. Khachatryan et al.” [3].

Many authors ending with `others`, producing et al. [4].

1.2. *arXiv identifiers*

Preprint with no journal entry: only eprint and primaryClass should appear [5].

Old-style arXiv identifier (`hep-th/9711200`): no `arXiv:` prefix should be added, no primaryClass bracket [6].

New-style arXiv ID with explicit `arXiv:` prefix in the eprint field: prefix should be stripped for the URL but preserved in the display text [7].

1.3. JHEP DOI inference

JHEP old DOI inference: year starts with 199, 2-digit volume;
expected DOI 10.1088/1126-6708/1999/05/021 [8].

JHEP new DOI inference: year starts with 201, 2-digit volume;
expected DOI 10.1007/JHEP08(2012)034 [9].

JHEP with explicit `doi` field: inference should be suppressed and the provided DOI used as-is [10].

1.4. Optional fields

Article with both `url` and `note` fields [11].

2. Books

Standard book with author, publisher, and address [12].

Edited volume with `editor` but no `author`: editor should appear in the attribution slot [13].

Book with `eprint` and `edition` [14].

3. Inbook, Inproceedings, Conference, Incollection

`inbook`: chapter in a book with pages and publisher [15].

`inproceedings`: with editor and old-style eprint [16].

`conference`: alias for `inproceedings` [17].

`incollection`: alias for `inbook`, with editor [18].

4. Misc

`misc` with eprint only [19].

`misc` with `howpublished` and `url` (no eprint) [20].

5. Theses

`phdthesis` with school and eprint [21].

`phdthesis` with no `school` field (edge case): should fall back to “PhD thesis (year)” with no comma [22].

`mastersthesis` with school [23].

6. Technical Reports

`techreport` with institution, number, and year [24].

`techreport` with number and year but no institution [25].

`techreport` with year only (no number, no institution): should output “(year)” with no double space [26].

7. Grouped citations (`mcite`)

Two references grouped under one citation number; the bibliography entry should show both separated by a semicolon [27].

Three references grouped; all three should appear under the same number [28].

A second two-entry group appearing after the three-entry group, to verify that citation numbers increment correctly [29].
